

TrueNute “BT” Caterpillar Killer

Thank you for your purchase of **TrueNute “BT” Caterpillar Killer!**

To insure you kill your caterpillars, please mix at a rate of ½ to 4 teaspoons per one gallon of water in a garden sprayer. Also use 2 tablespoons of dish soap to help the mix to stick to plants for the best results. We use Joy dish soap, but you can use others. Do not leave the mixture in your sprayer for more than 24 hours, and discard any unused mixture.

Store dry mix, taped closed, and in a dark air controlled area for longest shelf life up to 3 years.
