

TrueNute Potassium Bicarbonate

Thank you for your purchase of
TrueNute Potassium Bicarbonate!

TrueNute Potassium Bicarbonate is very easy to use, you just need to keep an eye on your PH so that you don't change it too quickly. Start out with about 1 ounce per 100 gallons and check your PH before as well as several hours after before adding more. Max of 3 ounces per 100 gallons per week or as needed. Try not to change your PH by more than 0.2 points per 24 hours so as not to stress your fish.
