

TrueNute Soft Rock Phosphate

Thank you for your purchase of
TrueNute Soft Rock Phosphate!

Use small handfuls and sprinkle the rock phosphate around the base of the plants that need the phosphate. Lightly water it in and watch your plants grow. If there are chunks, break them into small pea sized pieces. If you are adding directly to the water, you should add ½ ounce per week and get an API Phosphate Test and try to keep the phosphate between 2 and 4 PPM. This is a slow release product, so please be patient.

Remember to keep your water shaded as the phosphate can cause an algae plume.
