Mineral Supplements

- TrueNute Calcium Carbonate
- TrueNute Calcium Chloride
- TrueNute Calcium Sulfate
- TrueNute Copper Sulfate
- TrueNute Humic Acid
- TrueNute Iron Chelate 11% FeDTPA
- TrueNute Iron Chelate 6% FeEDDHA
- TrueNute Magnesium Sulfate
- TrueNute Molybdate
- TrueNute Potassium Chloride
- TrueNute Potassium Silicate
- TrueNute Potassium Sulfate
- TrueNute Seaweed Extract 1-0-19
- TrueNute Soft Rock Phosphate

Mineral Nutrient Kits

- TrueNute Three-Week Nutrient Dose Kits
- TrueNute Three-Week Dose Subscriptions

System Start Up

- TrueNute Thiosulfate Chlorine and Chloramines Remover
- TrueNute Fake Fish to Cycle a New System and Maintain One
- TrueNute Aquaponics Mineral Starter Kits

Aquaponic Accessories

- TrueNute Aquaponics Water Heater
- Ultra-Scrim Food Grade Compliant Pond Liner
- Ultra-Scrim SR 20WW Pond Liner
- Raft Master 4', 6' & 8' Wide Up To 100' Long
- Water Pumps
- Air Pumps
- Water Testing Kits
- Grow Grips

Pest Control

TrueNute Organic BT Caterpillar Killer

TrueNute Calcium Carbonate

Thank you for your purchase of

TrueNute Calcium Carbonate!

The idea is to get your calcium level to 100-150 PPM. The easiest way to do this is to purchase the test kit we list on the page where you bought this product. Also follow the instructions below.

Use 0.375 ounces per 100 gallons to start or 3.75 ounces per 1000 gallons. Check your PH before you add and then several hours later to see how your PH reacts. You do not want to change your PH more than 0.2 per 24 hours. Record all your readings and how much you added with the dates so that you have a reference of what you did, this will help you down the road. Then watch your plants for their reaction and adjust the amount you add no more than once per week. As you learn what your system needs by tracking what you do and how the system reacts, you will be able to put together a dosing schedule.

If you are trying to raise your PH, then monitor your PH daily as you make adjustments to the amount of calcium carbonate you add to your system. Always check your PH before and the several hours after you dose and record the levels along with how much you added so that you can track and adjust your progress. Again, do not change your PH more than 0.2 points in 24 hours or you risk shocking your fish.

TrueNute Iron Chelate FeDTPA 11%

Thank you for your purchase of
TrueNute Iron Chelate FeDTPA 11%!

To apply to your aquaponic or hydroponic system, you will need to weigh out 0.2430 ounces per 100 gallons of system water.

For 1000 gallons of water, you will add 2.43 ounces to the system.

This will keep your system at an average of 2 PPM of iron over the course of three weeks. At the end of three weeks, you will need to add iron again. The iron that has not been used by the plants will oxidize after 3 weeks and become insoluble, which means it cannot be up taken by the plants.

If you have seedlings in the system, cut the portions into 1/3 the amount and add weekly.

TrueNute Magnesium Sulfate

Thank you for your purchase of **TrueNute Magnesium Sulfate!**

Please only use 2 tablespoons per 400 gallons of system water every two weeks to start with, and monitor your plants for several weeks. When you see improvement then start using only one tablespoon per dosing.

If you see no change after 4 weeks, start using two and a half tablespoons per dosing. Please premix in a small bucket of water before you add to the solution. If you have a very small system, please contact us for support.

TrueNute Potassium Sulfate

Thank you for your purchase of

TrueNute Potassium Sulfate!

Add 0.1 ounces every other week for 100 gallons.

For a system with 1000 gallons, add 1 ounce every other week.

If you have a very small system, please contact us for support.

TrueNute Seaweed Extract

Thank you for your purchase of
TrueNute Seaweed Extract!

Two teaspoons of seaweed extract will mix with one US gallon of water. Store this mix in a cool dark area.

In new systems just starting out, add about ½ cup of the mix to your system water, assuming your system is about 400 US gallons. Adjust dosage for size of system. Shake well before using.

In a mature system that just needs a bit of a boost, add about ¼ cup to 400 US gallons.

TrueNute Soft Rock Phosphate

Thank you for your purchase of
TrueNute Soft Rock Phosphate!

Use small handfuls and sprinkle the rock phosphate around the base of the plants that need the phosphate. Lightly water it in and watch your plants grow. Break chunks into small pea sized pieces.

If you are adding directly to the water, you should add ½ ounce per week and get an API Phosphate Test and try to keep the phosphate between 20 and 40 PPM.

Remember to keep your water shaded as the phosphate can cause an algae plume.
