

TrueNute Tomato and Pepper Kit

Thank you for your purchase of
TrueNute Tomato and Pepper Kit

In each kit, you will find enough mineral packs to grow out determinate Tomato and pepper plants. Each pack of Vegetative Grow is for 2 weeks, giving you 8 weeks to just add very rich growth to the size of your plant. Most plants will start to flower in the 4th - 5th weeks but if it takes 8 weeks, we include the extra pack to get you there.

The flower packs should be switched to on your first dose date after you start to see flowers. So, if you have used 3 VEG packs, and you start seeing flowers, then at the end of 6 weeks, when your next dose is due, add your first flower and fruit pack.

Your Micronutrient Mix Packs are different from the rest. You will add the first pack on the first week with the first veg pack, then on week 8, add the second pack and then on week 12 add the 3rd micronutrient pack. Please reach out if you need any help, and trust me, do not double up on your doses, it will cause more harm than good. Make sure to rinse each pack out into your system to get everything out of the bag.

Follow the Chart for best results.
